Project Proposal

The theme of my proposed project is a simple guide to trees in the Pacific Northwest and how to identify common trees. The homepage carousal will consist of a collection of pictures of trees common to the region, with their names and citations. The first subpage will contain the unordered list, which will be a list of common tree families in the PNW. Tree families will have links to their respective Wikipedia entries. The second subpage will be a "tree of the week" page, highlighting a specific tree with a scroll box containing a short summary and identifying characteristics of this tree. A download button will be on this page to allow visitors to download a copy of this information. The final subpage will be a subscription form, allowing users to put in their contact information and submit the form to be added toa mailing list. In accordance with the project requirements, each page will have a horizontal navigation menu. A rough mockup of one of the subpages is shown below:
